

Nantes, France – November 28, 2022

Sercel makes another major sale of 508^{XT} in North Africa

Sercel announced today the sale of an 80,000-channel 508^{XT} acquisition system and 24 Nomad 65 *Neo* broadband vibrators for deployment on a 3D mega-crew seismic survey in North Africa in late 2023. This new equipment will join an existing installed base of two 508^{XT} systems, representing a total 180,000 channels, and a fleet of 30 Nomad 90 *Neo* vibrators that were delivered in 2021 to equip two other major projects in the same area.

The Nomad 65 *Neo* all-terrain vibrator, selected for its ability to operate efficiently in harsh conditions, will be used with Sercel's Smart LF software to reduce vibrator-induced low-frequency distortion and record a high-quality dataset over the widest frequency range. Sercel's Vibrator Auto-Guidance solution will also be used to significantly increase vibroseis productivity. When combined with the reliable and easy-to-deploy 508^{XT} acquisition system, this set of equipment will ensure large-scale and error-free operations.

Emmanuelle Dubu, Sercel CEO, said: "We are very proud to have been selected to equip a major onshore survey in North Africa for the third time in under two years. It demonstrates once again that Sercel's field-proven technology is an obvious choice for mega-crew configurations. With the combined performance of our 508^{XT}, Nomad 65 *Neo*, Smart LF and Vibrator Auto-Guidance solutions, our client will be well placed to overcome the challenges of desert operations while maintaining the highest productivity, reliability and safety levels."

About Sercel

Sercel designs and manufactures high-tech solutions for subsurface exploration. Capitalizing on its world-leading position in the seismic acquisition industry, Sercel also provides innovative solutions for structural monitoring, defense and underwater acoustics applications. Headquartered in Nantes (France), Sercel operates worldwide and employs more than 1,500 people. More information about Sercel is available at www.sercel.com.
