

PASSIVE ACOUSTIC MONITORING SYSTEM

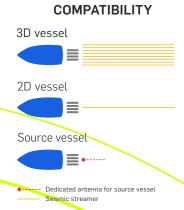

FEATURES & BENEFITS

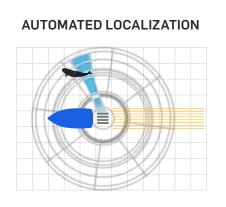

- INTEGRATED ARCHITECTURE
 Sensors within Sentinel® streamers
 - Interfacing Seal 428 & SeaPro Nav
- OPTIMIZED PRODUCTIVITY
 No external devices to entangle streamer
 False alarm rate reduction
- PRECISE MONITORING
 Automated detection & localization algorithms
 Objective decision-making

QuietSea $^{\text{TM}}$ is the new passive acoustic monitoring (PAM) system from Sercel designed to detect the presence of marine mammals during seismic operations.

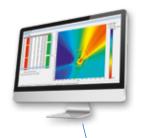

Unlike other separate antenna PAM systems, QuietSea is seamlessly integrated within the Sercel Sentinel seismic streamer (Sentinel, Sentinel RD and Sentinel MS).

WIDE FREQUENCY RANGE Whistles, moans and clicks Whistles, moans and clicks

Onboard equipments

Localization and Low frequency detection

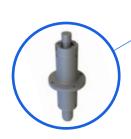

- OuietSea software
- Interface to Seal 428 and SeaPro Nav
- Acquisition & data processing (Streamer and Auxiliary modules)
- Data logging & localization display

Streamer module

High frequency detection

- Interfaced with positioning transducer
- A/D conversion
- Vocalization detection (200Hz to 96kHz) and timestamping
- Sensor test
- 50 or 70mm diameter
- Up to 4 modules per streamer

Auxiliary module

High frequency detection

- To be mounted on the vessel hull, head buoy or impulsive source array
- A/D conversion
- Vocalization detection (200Hz to 180kHz) and timestamping
- Sensor test
- Up to 8 modules per system

Sentinel

Low frequency detection

- Both seismic data recording and mammal monitoring
- Vocalization detection (down to 10Hz)
- Up to 512 processed channels per spread
- Sensor test
